## **CONSTRUCTION NOTICE**

**September 18, 2025**

**Blaine Lake, SK.** The Town of Blaine Lake advises that Unicon Construction will be Blaine Lake starting the week of September 23, 2024 to install several new isolation valves and hydrants with total value of the work to be completed exceeding \$ 170,000. Installation is expected to last until October, 2024.

Funding for this important project is being provided in part by the Federal and Provincial Governments through the Building Canada Fund. Once completed, the Town of Blaine Lake will, in essence, have new isolation valves and hydrants in the entire water distribution system. These upgrades, along with the new Water Treatment Plant, ensures that the Town of Blaine Lake has one of the most up to date water treatment plant and water distribution isolation valves/hydrants systems in Saskatchewan.

This will be disruptive at many intersections, and we thank all residents and visitors for your patience during construction. Please follow all safety restrictions and detours in place during construction.
