

CONSTRUCTION NOTICE

LONG TERM STREET UPGRADE PROGRAM

September 15, 2025

Blaine Lake, SK. The Town of Blaine Lake is pleased to advise that a special arrangements have been made to have Sands Maintainable Asphalt in Blaine Lake starting the week of September 22, 2025 to install the long-term dust control agent SB-90 Liquid Asphalt. While the Town had planned to wait until Spring, 2026, the dust issue in Blaine Lake was becoming progressively worse and a quicker solution was needed.

In accordance with the Strategic Plan, Objective 4.3 this will provide almost 25,000 square meters or approximately 20% of the Town's streets with long-term dust free surface with reduced grading and maintenance costs. The final product will be long-lasting and far superior to gravel roads.

The street will be closed during work, but open to traffic immediately after the work is completed. Flaggers may be used to keep the road open. The work is expected to last less than one week, depending upon the weather conditions.

All property owners in the affected areas are requested to move all your belongings, vehicles, waste carts, and recycle carts off the streets during this work as it will allow for a better end product.

This will be disruptive, and we thank all residents and visitors for your patience during construction. Please follow all safety restrictions and detours in place during construction.
